

My Projects

1. Personalized AI Assistant

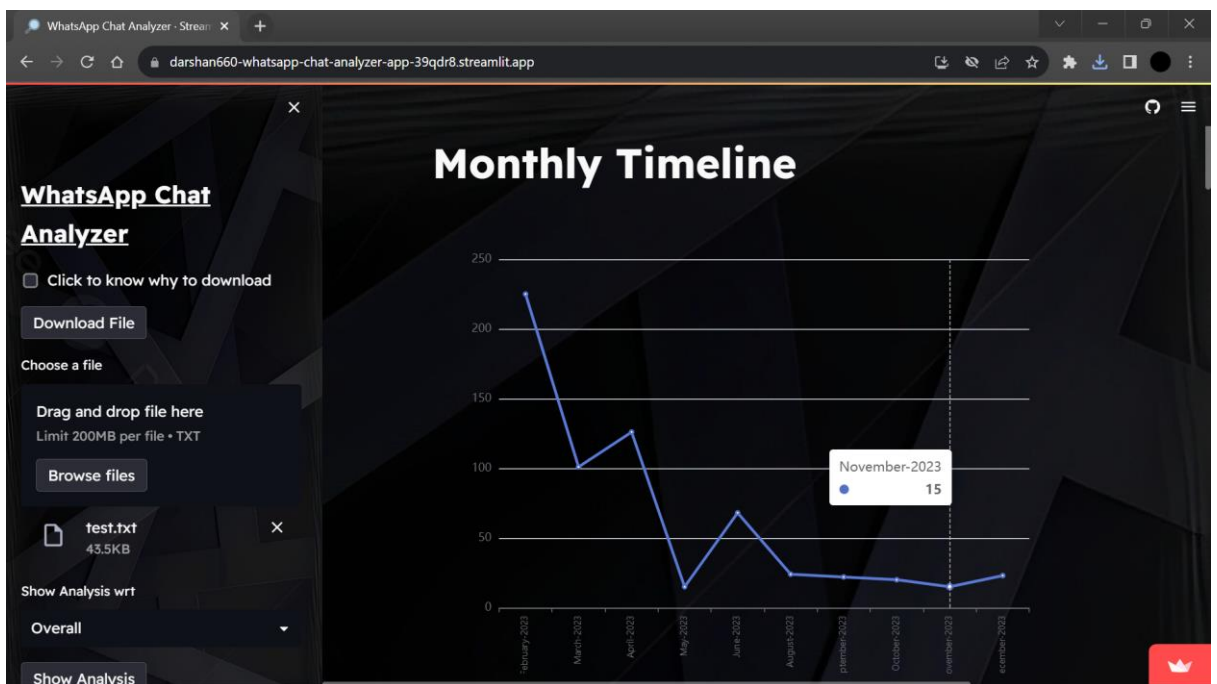

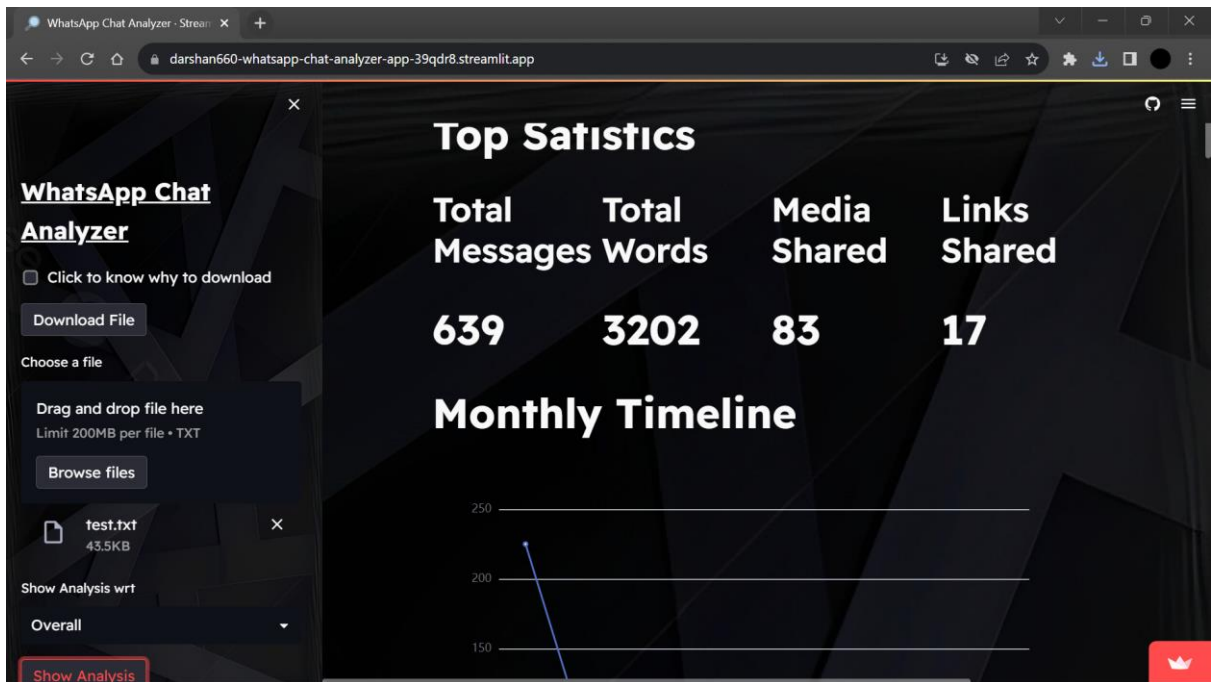

Leveraging the power of artificial, this project focuses on build a Virtual AI Assistant to help individuals or companies to maintain their Data Privacy, save manual efforts, increase productivity of the team. The Personalized AI Assistant project aims to create a highly customizable and intelligent virtual assistant with the user-friendly UI.

2. WhatsApp Chat Analyzer

Link: [Click Here to view my project live](#)

Are you suffering from the problem of waking up in the morning and getting a hundreds or thousands of messgaes in a group. Also the family group in which you never read a message, want to know in details about whats the stats of the group and what people are talking about? So I introduce my project to you The WhatsApp Chat Analyzer. It is a tool designed to analyze and visualize the conversations held on WhatsApp. This tool will help users understand their chat patterns, frequency of messages exchanged with different contacts, and more.

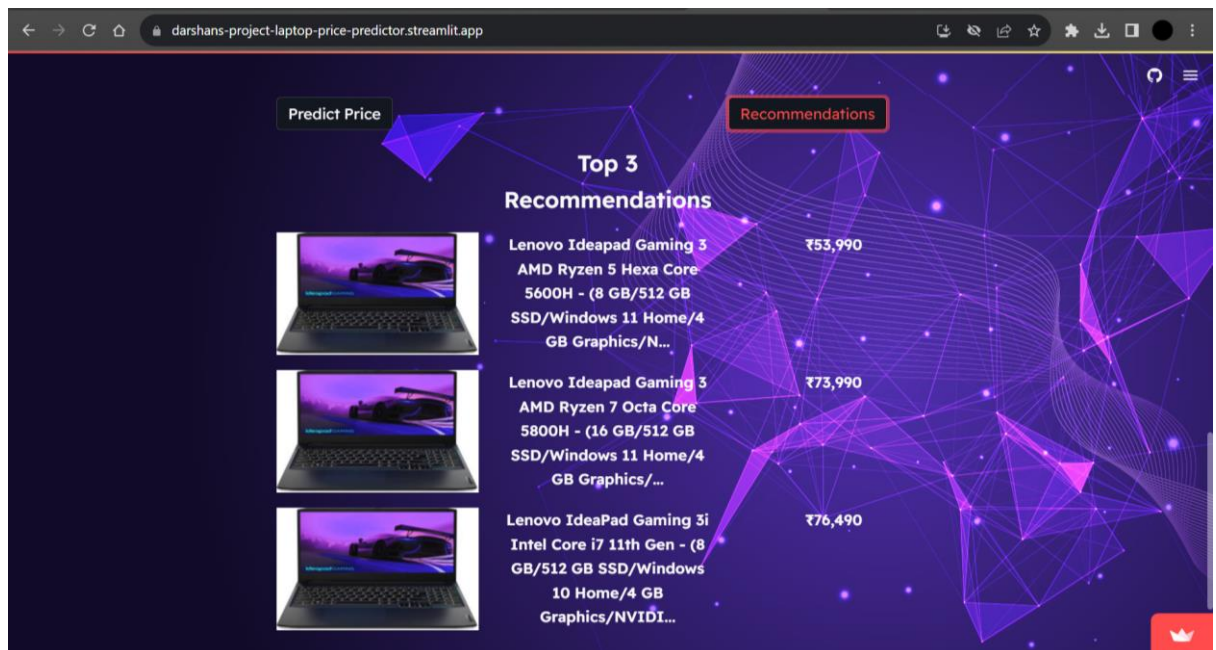

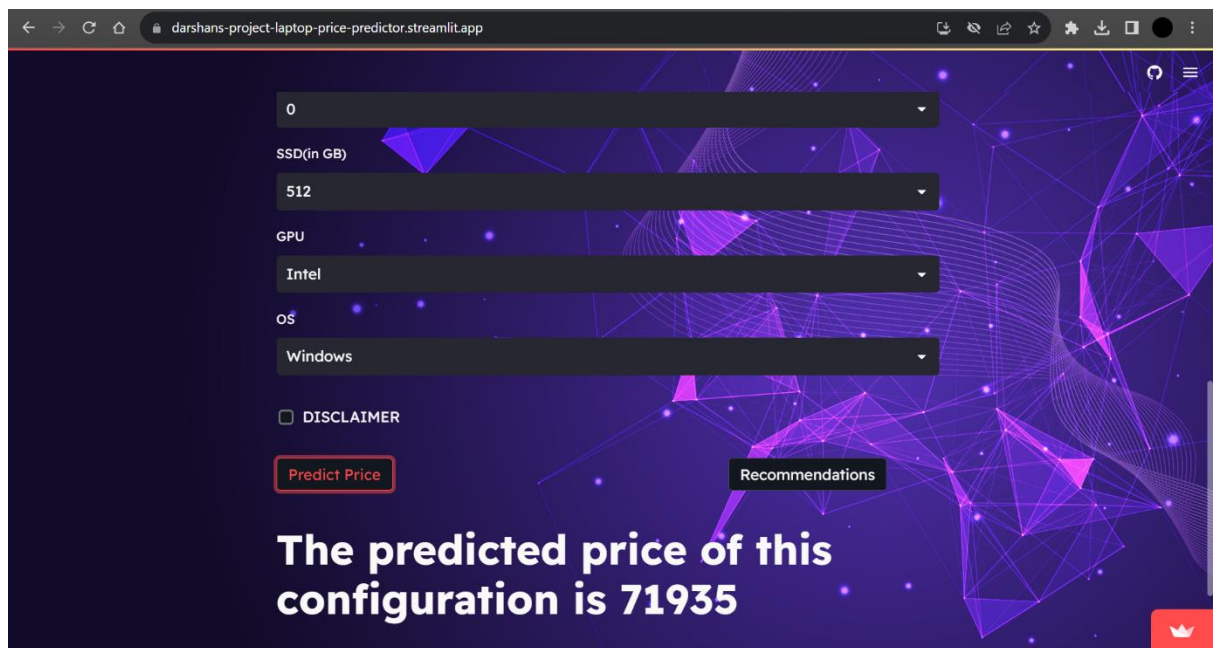

And many more analysis you can view while exploring the project. This is just a glimpse of it.

3. Laptop Price Predictor

Link: [Click Here to view my project live](#)

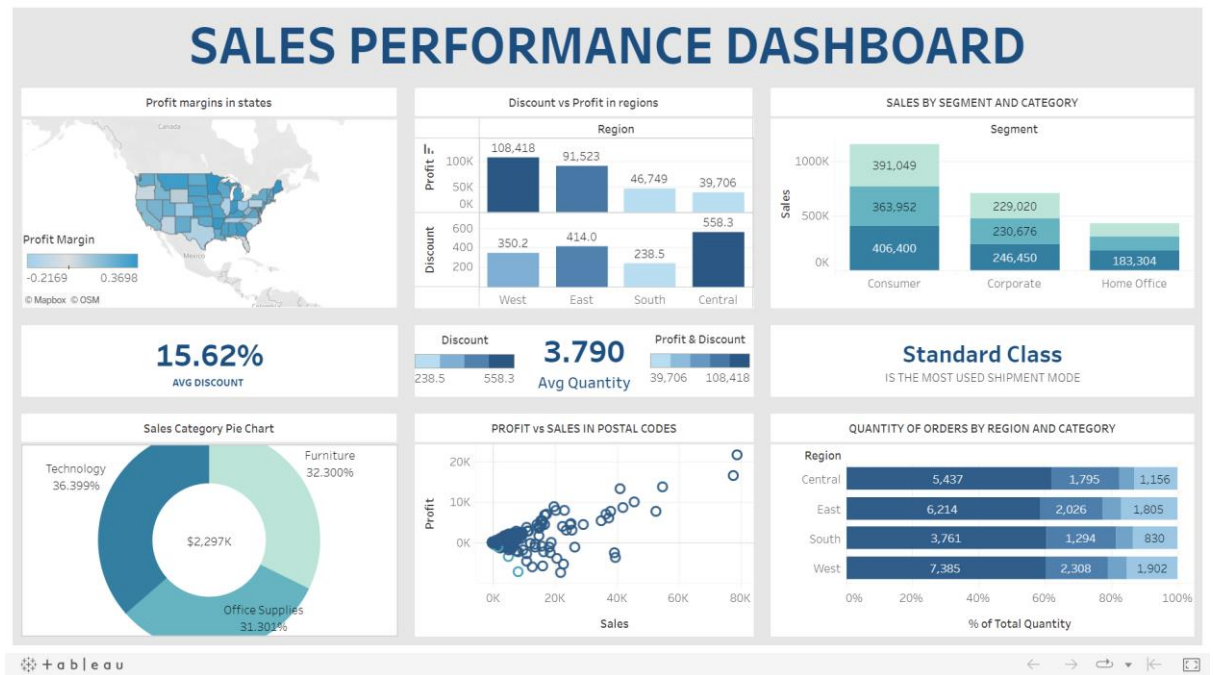

The Laptop Price Predictor is an advanced ML project that estimates laptop prices based on specs. Using a user-friendly web app, input laptop specs to get a price range. Recommendations are also provided based on specifications entered. With one click on the recommended laptop, users are directed to the buying page.

4. Sales Performance Dashboard

Link: [Click Here to view my Dashboard](#)

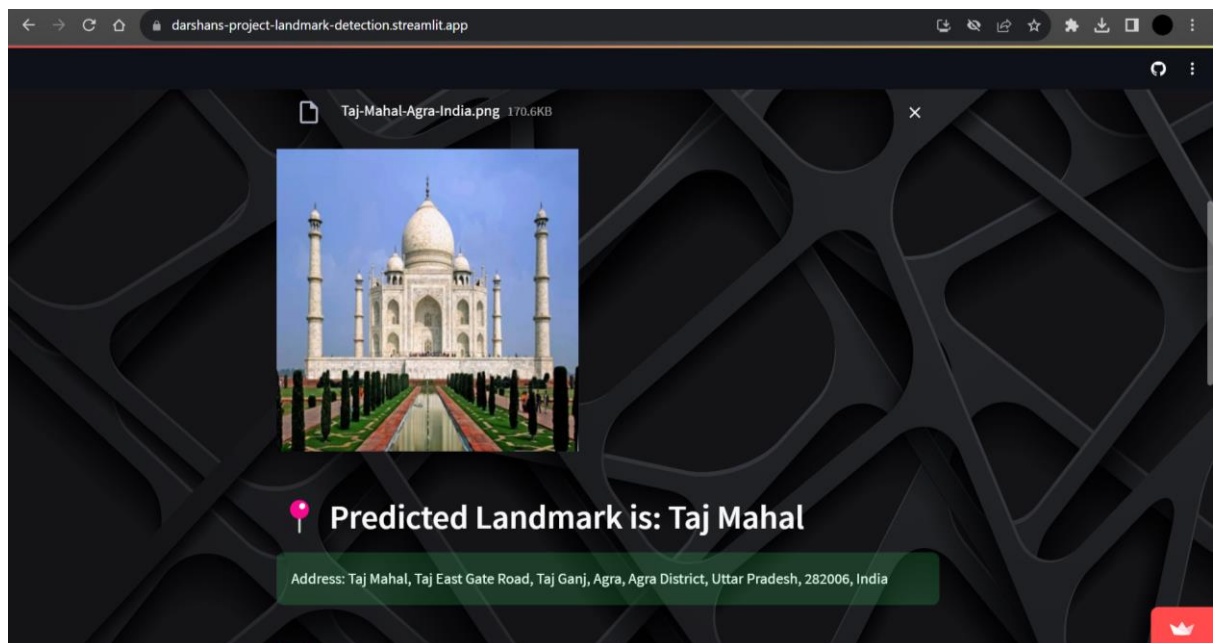

This interactive sales performance dashboard on Tableau Public provides a comprehensive and visually appealing platform to analyze the US Sample Super Store dataset, empowering data-driven decision-making.

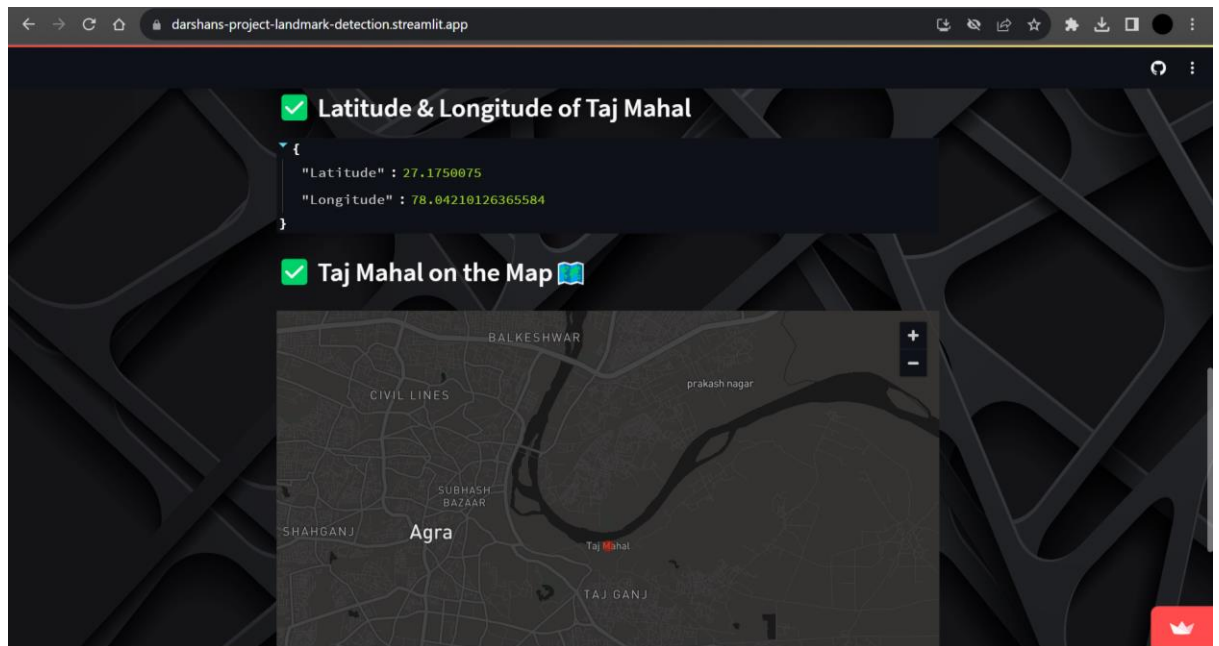

5. Asian Landmark Detection

Link: [Click Here to view my project live](#)

The Asian Landmark Detection project provides a user-friendly web interface where users can upload images containing Asian landmarks of their choice. The system then processes the uploaded image and predicts the name of the Asian Landmark and also provide you the geolocation of the landmark.

6. Automatic Tech News Generator

The Automatic Tech News Generator is a cutting-edge tool that fetches the latest technology news from Business Today's website, offering users a selection of six articles presented in different templates. Catering to content creators and influencers, it enables efficient content sharing by providing downloadable news images. With the option to refresh for diverse templates, users can effortlessly customize their news presentation, enhancing productivity and engagement.
